р.3

Please cancel claims 10-18, amend claims 1-3, 5-9 and add new claims 21-29 as follows:

CLAIMS

1. (Amended) A container closure for a container comprising:

a top;

an annular side wall extending from the top, the side wall having an internal thread adapted to engage with threads of the container around a container opening; and

a tamper-evident portion on a lower portion of the side wall, the tamper-evident portion including a plurality of leaders extending across a score line to a lower band, the lower band including a substantially continuous internal projection below the leaders, wherein the projection includes an angled portion for a portion of a the circumference of the tamper-evident portion forming a one-way lead-in thread for the projection, wherein the one-way lead-in thread formed by the angled portion has a pitch extending in a same direction as the internal thread of the annular side wall, whereby the one-way lead-in thread formed by the angled portion allows the projection of the tamper-evident portion to be threaded past a retaining ridge of a container.

- (Amended) The closure as claimed in claim 1 wherein the angled portion forming the one way lead-in thread extends for about ninety degrees of the circumference.
- 3. (Amended) The closure as claimed in claim 2 further including a plug seal on the top, wherein the angled portion forming the one way lead-in thread includes a rounded end, and wherein the angled portion is angled [in] with the same [direction] pitch as the threads on the side wall.
- 4. (Original) The closure as claimed in claim 1 wherein the projection is a rib having a length-to-width ratio of at least one and one-half.
- 5. (Amended) The closure as claimed in claim 4 wherein the rib is substantially rectangular in cross-section, has a substantially uniform cross section around the circumference, and has a length-to-width ratio of at least two, and is angled away from the top.

6. (Amended) A tamper-evident portion for a container closure wherein the tamper-evident portion is on a lower portion of the side wall of the container closure, the tamper-evident portion comprising:

a lower band;

a score line between the lower band and the side wall of the container closure;

a plurality of leaders extending across the score line between the lower band and the side wall of the container to connect the lower band to the side wall; and

a substantially continuous internal projection on the lower band below the leaders, wherein the projection includes an angled portion for a portion of a the circumference of the lower band forming a one-way lead-in thread for the projection, whereby the one-way lead-in thread formed by the angled portion allows the projection of the tamper-evident portion to be threaded past a retaining ridge of a container.

- 7. (Amended) The tamper-evident portion as claimed in claim 6 wherein the angled portion forming the one way lead-in thread extends for about ninety degrees of the circumference.
- 8. (Amended) The tamper-evident portion as claimed in claim 6 wherein the projection is a rib having a length-to-width ratio of at least one and one-half and wherein the angled portion forming the one way lead-in thread includes a rounded end.
- 9. (Amended) The tamper-evident band as claimed in claim 6 wherein the rib is substantially rectangular in cross-section, has a length-to-width ratio of at least two, has a substantially uniform cross section around the circumference, and is angled away from the leaders.

10-18 (Cancelled)

19. (Amended) A one-piece injection molded container closure for a container comprising:

a top;

p. 5

an annular side wall-structure extending from the top, the side structure including an upper side wall having an internal thread adapted to engage with threads of the container around a container opening; and

a substantially continuous internal rib extending inwardly directly from the side structure and having a length-to-width ratio of at least one and one-half, wherein the rib maintains hoop-like characteristics and extends inwardly from the side structure away from the top as molded-and in use on a container.

20.(Amended) The container closure as claimed in claim 19 wherein the rib is substantially rectangular in cross-section, and has a length-to-width ratio of at least two, and is angled away from the top.

- 21. (New) The container closure of claim 19, wherein the rib has a substantially constant cross section around a circumference of the side structure.
- 22. (New) The container closure of claim 19 wherein the rib is designed to flex toward the side structure during exiting of the mold and forms a rigid element relative to the side structure following molding.
- 23. (New) The container closure of claim 19 wherein the rib forms a rigid interfering element for a tamper evident band.
- 24. (New) A one-piece injection molded container closure for a container comprising:

a top;

an annular side wall extending from the top, the side wall having an internal thread adapted to engage with threads of the container around a container opening; and

a tamper-evident portion on a lower portion of the side wall, the tamper-evident portion including a plurality of leaders extending across a score line to a lower band, the lower band including a substantially continuous internal rib below the leaders, wherein the substantially continuous internal rib extends inwardly and has a length-to-width ratio of at least one and one-half, wherein the rib maintains hoop-like characteristics and extends inwardly from the lower band away from the top as molded and in use on a 4 container.

p.6

- 25. (New) The container closure as claimed in claim 24 wherein the rib is substantially rectangular in cross-section and has a length-to-width ratio of at least two.
- 26. (New) The container closure of claim 25, wherein the rib has a substantially constant cross section around a circumference of the lower band.
- 27. (New) The container closure of claim 26 wherein the rib is designed to flex during exiting of the mold and forms a rigid interference element for the tamper evident portion following molding.
- 28. (New) The container closure as claimed in claim 24 wherein the rib includes an angled portion for a portion of a circumference of the lower band forming a one-way lead-in thread for the rib, whereby the one-way lead-in thread formed by the angled portion allows the rib of the tamper-evident portion to be threaded past a retaining ridge of a container.
- 29. (New) The container closure of claim 24 wherein the rib is thicker than the thickness of the side wall.
